

LumiTap Assembly Guide

Base

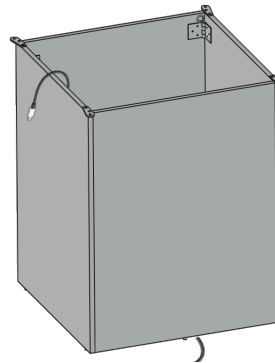

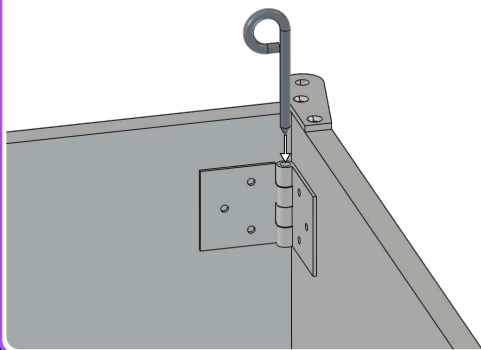

4x 

4x 

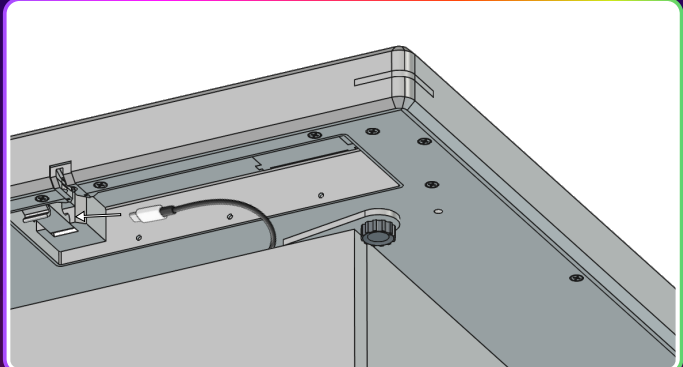

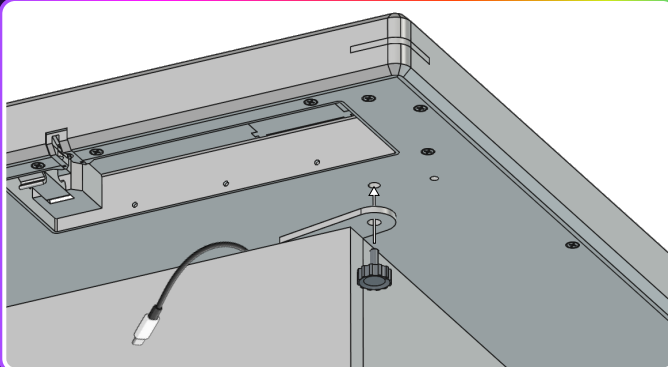

The package contains 4 pins, 4 screws and one "left" (marked with a dot) and "right" half of the base. The halves are shipped closed and stacked rotated.

Unfold the two halves and align them, standing on their feet.

Interlock the hinge leaves (may require some force) and then secure with the pin (if needed, vary the angle between the halves slightly to insert the pin more easily).

The base is now assembled. If using the LumiTap power supply, place the base over the outlet, plug in the power supply and route the cable over the edge.

Insert screws through the base bracket into the LumiTap (start loosely until all four screws fit, then tighten), paying attention to the position of the power cable if necessary.

Connect power cable. The LumiTap is now ready for use.
