

LumiTap Instructions

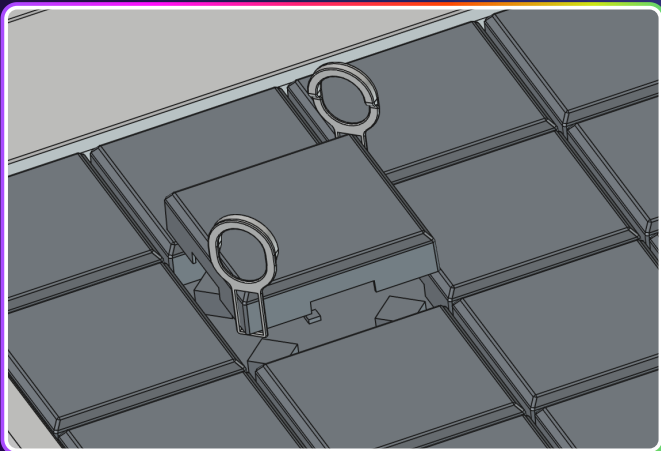

Key Replacement

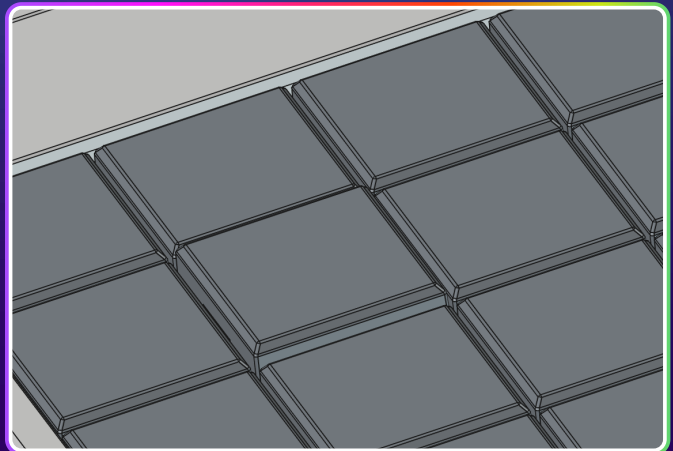

Insert the first tool into the gap at one corner of the cap to be removed.

Slide the tool in the gap toward the corner of the cap and then rotate it around the corner so that it hooks under the cap

Position the second tool the same way at the opposite corner. Pull upward on both tools with moderate force and the cap will come off.

To install, place the cap on the switches. Make sure that the switches line up with the retainers on the back of the cap (uniform gap all around, does not shift under light lateral pressure). Then press all four corners evenly down. If a switch tilts and cannot be fully pressed in, then remove the cap and try again.
